

FONTANELLI" - BABIES SWIMMING **AFFECTIVE METHOD**

Characteristics:

The method is based on affection, intending to enhance the sensorial aspects, and reach the primitive children's instincts like: The right to be, cry, express themselves, talk, suck, touch and to be touched, which ones, are the base for the human beings' relationship.

Objectives:

Minimize frustrations, allowing a self physical and psychological balance, and will benefit the baby, even in the pregnancy period, making a link of fondness between parents, colleagues and teachers, always involved in the natural 'habitat' they have in common, which is the water.

The method is established:

The affection created around the baby, will assure self-esteem and discipline as a result of the discoveries of its own potentials. These discoveries start with security in the water, then self-confidence, movements development, desire, freedom, autonomy, independence, imitations, daringness to explore the environment, and culminate in the process of this development discovering the potential of socialization. All these steps are developed without making the baby feel 'beaten' in its structure.

Conclusion:

Finally I realize that the babies swimming affective method created by me has been being extensively approved and already used with more than 18000 children in lots of countries, in a very interesting way has allowed babies to develop their maturation chronologically, and helped them to stand in an easy-going way their former and natural difficulties like: regression, affection, link potentials and trust and doação potentials, turning a fragile children into a balanced children capable to learn and develop, while facing the steps of the life. To love means to give all of us to someone who is specially precious. To succeed this mission is necessary that you, parent, doctor and teacher, join this battle and never forget that:

**"Whatever the man is,
Good or bad, fool or smart,
Is nothing else than a child.
It is a child,
An exclusive work from who brought him up..."**
